

# Poli-Tape 160

---

## Product Information

A transparent Application-Tape based on a polypropylene film embossed on one side that is dimensionally stable, easy to unroll, position and will not stretch or curl.

Poli-Tape 160 is suitable for transferring self-adhesive signs, logos and lettering produced from cast or calendered CAD/CAM plotter films with matt or brilliant surfaces.

- The embossed surface allows the film to be easily unrolled without accumulation of static electricity.
- As the tape does not curl, wrinkling is avoided during lamination of large lettering. The film adjusts perfectly to the surface.
- The plasticizer-resistant acrylic adhesive ensures a constantly high adhesive strength and can be removed without residues even after a longer period of time.
- Suitable for wet applications.
- The film can be torn transversally which facilitates handling.

## Technical Data

<b>Adhesive</b>	: acrylic
<b>Carrier</b>	: polypropylene film, transparent
<b>Thickness [mm]</b>	: 0,11 +/- 0,005
<b>Adhesion [N/cm]</b>	
AFERA 4001	
Steel	: 0,90 +/- 0,20

## Standard Dimensions

1.220 mm x 100 m  
1.000 mm x 100 m
